ForeFlight

Customer Notice

Dear Customer,

We want to make you aware that **Apple iOS/iPadOS 18** will soon become the minimum-supported iOS for new versions of ForeFlight Mobile. We plan to make this change with an app release next month.

After the new iOS minimum goes into effect, devices that are not running at least iOS 18 will not be able to install new versions of ForeFlight. However, essential features like monthly chart and data downloads, documents, and account data syncing will continue to work for recent app versions.

Which devices are affected?

The following devices, released in 2017-2018, will lose support with the next ForeFlight app release, since they can't upgrade to iOS 18:

- iPad (6th gen)
- iPad Pro 10.5-inch
- iPad Pro 12.9-inch (2nd gen)

Your account is associated with one of these devices, or an even older one, which will not be able to install new versions of ForeFlight.

Next Steps

If you currently use ForeFlight on one of the devices listed above or an earlier model, we recommend purchasing a newer device that supports iOS 18 so you can continue using the latest version of ForeFlight.

Visit More > Account in ForeFlight Mobile or sign into foreflight.com/account to view and manage the devices on your account.

For recommendations and guidance on purchasing a new iPad, check out our iPad Buying Guide to see which models and configurations best suit your flying.

Blue skies,
- Team ForeFlight
